

INK KLEEN

ADVANCED ANILOX CLEANING GEL

NON CAUSTIC | NON TOXIC | NON FLAMMABLE | NON CORROSIVE

Description:

INK KLEEN is a highly concentrated, powerful cleaning gel formulated to safely remove solvent-based, water-based, and UV inks from anilox rollers. Do not allow UV Inks to dry on the roller.

It's thickened formula clings to surfaces, allowing deep penetration into anilox cells and is safe for use on both ceramic and chrome rollers. INK KLEEN Gel is also suitable for general pressroom cleaning of machinery, components and floors. Additionally, it can be used to remove most varnishes, coatings, and emulsion adhesives.

Directions:

1. Apply:

Apply INK KLEEN Gel directly to the surface of the anilox roller using an anilox cleaning pad or brush. Ensure full and even coverage with a thick layer of gel.

2. Dwell Time:

Allow the gel to sit for 10–15 minutes.

3. Agitate:

Use an anilox cleaning pad or brush to agitate and remove stubborn ink deposits.

4. Rinse Thoroughly:

Rinse the roller thoroughly with warm water to remove all residue.

5. Dry:

Wipe dry with a clean lint-free cloth making sure the roller is completely dry before returning to production.

INK KLEEN Gel can also be used for general press cleaning (rubber rollers, ink trays, doctor blades, press room floors etc)

Key Features:

- Highly Concentrated
- Extremely Versatile
- Superior Cleaning Power
- Cost Effective
- Non Flammable
- Non Toxic
- Non Caustic
- Non Corrosive
- Non Hazardous For Transport
- 10 Ph

Enviromental:

All surfactants contained in INK KLEEN comply with the current European Regulations concerning biodegradability & protection of the environment.

CAUTION: Pre Testing on all surfaces is recommended before use

Health & Safety:

Safety Data sheet available separately.

Wear suitable personal protective equipment. Avoid contact with skin, eyes and clothing. Wash hands after use
